                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2511 GCTTAAAATAAGGCACATTCACTAAAAGAAAGGCCAGTAAAATAATTAAGCCCACCCGTT 2452
                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a new computer readable medium with an diagnose the presence of E. faecalis in a sample or determining the presence of a specific microbe in a sample. The invention is useful to presence of a specific microbe in a sample. The invention is also useful for modulating the growth or pathogenicity of E. faecalis, in a vaccine to confer resistance to Enterococcal infection, for commercial, therapeutic and industrial purposes, and for fermenting a particular sugar source or to produce a particular metabolite. The invention is useful for detecting diseases related to Enterococcus infections in animals, and for detecting E. faecalis using biochip technology. The present nucleic acid sequence represents an Enterococcus faecalis contig DNA sequence of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          110
                                                                                                                                                                                                                                     Computer readable medium having recorded on it a Enterococcus faecalis nucleotide sequence useful for detecting diseases related to Enterococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        25
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        72
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        92
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2571 AACCAAAAATCAAAATGAACTGAACTTTTGAAGACATTTTTTCACGGACTTAATAAAACAC

The invention relates to an isolated mucleic acid comprising at least 10 in the invention relates to an isolated mucleic acids encode cancer associated proteins. Also included are an expression vector comprising the isolated nucleic acid cited above, a host cell comprising the above ceremblant nucleic acid cited above, a host cell comprising the above ceremblant nucleic acid cited above, a host cell comprising the above ceremblant nucleic acid cited above, a microarray for detecting cemprising at least 10 contiguous nucleotides of any of the above comprising trame of a CA sequence selected from any of the above comprising frame of a CA sequence selected from any of the 35 complement), an isolated antibody, (or its antigen binding fragment) that binds to the above polypebtide, a hybridoma that produces the above monoclonal antibody, a pharmaceutical composition comprising the above mancolonal antibody, a pharmaceutical composition comprising the above mancolonal antibody, a pharmaceutical composition comprising the above methody and a pharmaceutical composition comprising the above methody and a pharmaceutical composition of cells in an antibody and a pharmaceutical composition comprising the above methody and a pharmaceutical composition and cells in an individual, a method for inhibiting growth of cancer cells in an individual, a method for delivering a therapeutic agent to cancer cells in an individual, an electronic library comprising the above polymeticancer activity or for a bloactive agent capable of modulating the activity of a CA protein (CAP), methods for inhibiting the expression of for anticancer activity or for a bloactive agent capable of modulating cancer associated with expression of a polypeptide in a test cell sample. These may also be used in screening for agents that modulate cancer. The present sequence is a mouse CAP generic data for this parent din or form part of the prince of the prince of the prince of the prince of the prince of the prince of the prince of the prince of the prince of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 133462 BP; 39091 A; 24305 C; 25093 G; 41557 T; 0 U; 3416 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated cancer-associated polynucleotides and polypeptides useful for diagnosing, preventing or treating cancers, especially lymphoma and leukemia, or in screening for agents that modulate cancer.
                                                                                                                                 Mouse, ds, cancer-associated protein, gene, cytostatic, cancer, leukaemia, lymphoma, CAP.

                             The invention relates to a purified nucleic acid molecule associated with lactation or muscle and fat deposition (designated LMFD), derived from cattle, and the LMFD nucleic acid can specifically Mybridise to a second nucleic acid molecule comprising any of 1512 nuclectide sequences.

(a) appearing as ABX34836-ABX49947, or complements of them. Also included are idlined to a promoter and a 3' non-translated sequence that cardid linked to a promoter and a 3' non-translated sequence that functions in the cell to cause termination of transcription and addition of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and (2) determining a level or pattern of a molecule in a bovine cell or tissue comprising; (a) incubating a marker nucleic acid (comprising any of the 15112 nucleic acid sequences or its complement cell or complementary nucleic acid sequences or its complement cell or fissue, where hybridisation between the marker nucleic acid and the complementary nucleic acid permits the detection of the molecule; and (b) of tissue, where hybridisation between the marker nucleic acid, and the complementary nucleic acid permits the detection of the molecule; and (b) of effecting the level or pattern of the complementary nucleic acid sequence complementary nucleic acid permits the detection of the molecule. The LMFD nucleic acid is used for the detection of the molecule. The LMFD nucleic acid is used for the complementary nucleic acid is used for the section of the molecule. The LMFD nucleic acid is used for the section of the molecule. The LMFD nucleic acid is used for the section of the molecule for use in cattle gene expression, or for genetically improving cattle. The present sequence is one of the selectronic format from the uspecification but was obtained in province LMFD EST (expressed sequence tag) nucleic acids. Note: The present sequence was not shown in the specification but was obtained in electronic format from the USPTO web site:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      96 AAGATAAGACACCAGATTCTCAAACTGCCAACTAGTCGTCTGCCCAGTAGCTGACGACGG 155
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          69
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   49
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              83

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The invention provides nucleic acid markers of prostate, breast and bladder cancer. The markers are indicators of malignant transformation of prostate, breast and bladder tissues and are diagnostic of the potential for metastatic spread of malignant prostate tumours. The nucleic acid can also be used as targets for therapeutic intervention in prostate cancer, benign prostatic hyperplasia (BPH), bladder cancer or breast cancer. The markers may be used to design specific probes and primers, for the rapid analysis of prostate, bladder or breast biopsy samples. The probes and primers may also be used for in situ hybridization or in situ PCR detection and diagnosis. They may also be used to identify and isolate full length gene sequences form various DNA libraries. Antibodies against the polypeptide products of the markers can be used to treat prostate cancer, bladder cancer or breast cancer. The encoded proteins may be used

Novel RNA biomarkers for diagnosis, prognosis and management of prostate, breast and bladder cancer.

Example 5; Page 184-186; 191pp; English.

for

immunodetection methods for detecting or quantifying the cancers, and for clinical diagnosis of these cancers. The antibodies may also be used for radioimaging to quantify and localize the encoded proteins

Proteins encoded by the nucleic acid markers and be used to produce antibodies for the detection of prostate. breast or bladder cancer. Blomarker nucleic acid sequences can be used as hybridisation probes and primers that specifically hybridise to prostate cancer, benign prostatic hyperplasia (BFH), bladder cancer or breast cancer markers. The nucleic acids can be used as targets for therapeutic intervention in these diseases, in the identification and isolation of full-length gene sequences, including regulatory elements for gene full-length genemic human DNA libraries, as hybridisation probes for screening genomic human DNA libraries. The kits comprising the nucleic acid sequences are useful for detecting bladder, breast or prostate

The nucleic acids can be used as targets for therapeutic intervention in these diseases, in the identification and isolation of full-length gene sequences, including regulatory elements for gene expression, from genomic human DNA libraries, as hybridisation probes for screening genomic human DNA libraries. The kits comprising the nucleic acid sequences are useful for detecting bladder, breast or prostate cancer cells in a biological sample.

The markers are indicators of malignant transformation of prostate, breast and bladder tissues and are diagnostic of the potential for metastatic spread of malignant prostate tumours. The nucleic acid can also be used as targets for therapeutic intervention in prostate cancer, benign prostatic hyperplasia (BPH) bladder cancer or breast cancer. The markers may be used to design specific probes and primers, for the rapid analysis of prostate, bladder or breast biopsy samples. The probes and primers may also be used for in situ hybridization or in situ PCR detection and diagnosis. They may also be used to identify and isolate full length gene sequences form various DNA libraries. Antibodies against

The encoded proteins may be used to detect antibodies. The proteins and antibodies can be used in immunodetection methods for detecting or quantifying the cancers, and for clinical diagnosis of these cancers. The antibodies may also be used for radioimaging to quantify and localize the encoded proteins
                                                                                                                                                                                                                                                                                                                 120

Biomarker nucleic acid sequences can be used as hybridisation probes and primers that specifically hybridise to prostate cancer, benign prostatic hyperplasia (BPH), bladder cancer therapeutic intervention in these diseases, in the identification and isolation of full-length gene sequences, including regulatory elements for gene expression, from genomic human DNA libraries, as hybridisation probes for screening genomic human DNA libraries, as hybridisation probes cancer calls in a biological sample
                                                                                                                                                                                                                                                                                                                                                                                              New nucleic acids as biomarkers and targets useful for detecting, diagnosing, prognosing, and in developing treatments for prostate, breast and bladder cancer.

```
The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polynucleotide encoding a polypoptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant with the cacombinant DNA construct and growing the transformed plant with the polynucleotide or polypeptide is useful for improving plant with the polynucleotide or polypeptide is useful for improving plants with improved plant properties, e.g. improved cold, heat or accompliate.

The recombinant DNA construct is useful for producing plants with improved plant properties, e.g. improved cold, heat or accomplication. Collerance to herbicides, extreme osmotic conditions, pathogens or pests, increased resistance to plant disease, better growth rate by modification of the plant growth rate by modification of carbohydrate, introgen or content, improved plant growth and development under at least one stress condition, improved light production of photosynthesis or by production. This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence detail or this patent did not form part of the printed specification but was obtained in electronic form part of the printed specification but was obtained in electronic form part of the printed specification but was obtained in electronic form at from USPTO at seqdata.uspto.gov/sequence.thml.
New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              13 MHNIIHILQIRKLRHRL----SNFP------RLPGILAPETVLLPFCYKVF 53
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    32; Gaps

                                                                                                                                                                                                                                                                                           g
                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polymucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant the recombinant DNA construct and growing the transformed plant, where the combinant DNA construct is useful for improving plant properties. The recombinant DNA construct is useful for producing plants with cimproved plant properties, e.g. improved cold, heat or drought tolerance, compressed resistence to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of homologous recombination, modified seed oil or protein yield and/or content, improved yield by modification of carbohydrate, nitrogen or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.

phosphorus use and/or uptake, by modification of photosynthesis or by providing improved plant growth and development under at least one stress condition, improved lignin production or improved galactomannan production. This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at sequence.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                    -----RLPGILAPETVLLPFCYKVF

This invention relates to novel PFM (PR family member)/SET (Su(var)3-9, Enhancer-of-Zeete and Trithorax) nucleotides and encoded polypeptides thereof that are implicated in proliferative disorders such as cancer. Specifically, it refers to a functional fragment of the PFM/SET tumour suppressor gene that encodes a PR, SET, PRAZ or PKZL domain. The present invention describes the identification and characterisation of additional PR/SET-domain family members that can be used as regulators of cell proliferation and furthermore to treat, prevent or diagnose hyperproliferative disorders including scleroderma, arthritis, alcoholic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 polypeptides, useful for preventing or treating cancers, scleroderma, arthritis, keloids, atherosclerosis, Huntington's disease or Alzheimer's

                    ADF50279
```

This invention relates to a novel method for targeting disruption of an arbitrary gene in a genome of an organism which comprises providing the whole sequential data of the genome of such organism, selecting at least a rabitrary region in the sequence, providing a vector that contains a sequence homologous with the selected region and a marker gene, transformation, and homologous recombination. The genome is preferably the genome of a hyperthermostable archaebacterium, particularly the genome of a hyperthermostable archaebacterium, particularly Thermococcus kodakazaensis KOD1. The method is for targeting the studying gene structure and functions as well as enzyme activities of encoded proteins and useful in medicine, forenaic science, food or drug inspection, molecular biology and immunology. With this method, the disruption of a gene at an arbitrary position in a genome can be achieved efficiently and reliably. The present sequence is that of a protein cencoded by the genome of Thermococcus kodakaraensis which was derived using the method of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

New isolated nucleic acid molecule comprising a sequence encoding a PFM/SET polypeptide, useful for diagnosing, prognosing, preventing and treating proliferative disorders, e.g. cancer.

Claim 1; SEQ ID NO 4; 38pp; English.

The invention describes an isolated nucleic acid molecule comprising a sequence encoding a PFM/SET protein binding motifs polypeptides comprising a 689, 1061, 367, 717, 571, 951, 1257, 720, 720, or 770 amino acid sequence (P1-P9), given in the specification. Also described are: a vector comprising the isolated nucleic acid molecule; a host cell

```
comprising the vector; an oligonucleotide comprising at least 17
contiguous nucleotides of the nucleic acid molecule; a primer pair for
detecting PFM/SET nucleic acid molecule, comprising two isolated
coligonucleotides; detecting PFM/SET nucleic acid molecule in a sample;
coligonucleotides; detecting PFM/SET nucleic acid molecule in a sample;
condulating cell growth by introducing the vector into a host cell, and
expressing the encoded PFM/SET polypeptide in a mamount effective to
modulate growth of the cell; isolating PFM/SET polypeptide by growing the
nost cell under conditions appropriate for the expression of the
polypeptide; the isolated PFM/SET polypeptide, or its functional fragment;
an isolated immunogenic PFM/SET polypeptide, comprising at least 8
contiguous anino acide of PLP9; an antibody or its antigno-binding
fragment that specifically binds to PFM/SET polypeptide; detecting
Contiguous anino acide of PLP9; an antibody or its antigno-binding
PFM/SET polypeptide in a sample; and screening for a compound that
conducting the polypeptide with one or more candidate compounds, and
determining histone methyltransferase activity of the contacted
colfiguration produced methyltransferase activity of the contacted
colfiguration produced methyltransferase and methods are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              704 HILKANIPGAELPPSIRKLRPAGPGEPDPMLSTHTQLTGTIATPPVCCPHCSKQYSSKTKM 763

given in the specification. Also described are: a recombinant expression given in the specification. Also described are: a recombinant expression vector; a cell comprising a recombinant expression vector of (1); producing an S. epidermidis polypeptide; an isolated nucleic acid comprising a nucleotide sequence of at least 8 nucleotides in length; a vaccine composition for prevention or treatment of an S. epidermidis infection, comprising a nucleic acid cited above and a carrier; treating a subject for S. epidermidis infection; a recombinant or substantially pure preparation of an S. epidermidis polypeptide or its fragment; a vaccine composition for prevention or treatment of an S. epidermidis infection; detecting the presence of a Staphylococcus nucleic acid in sample; a computer readable medium having recorded in it the nucleotide sample; a computer readable medium having recorded in it the nucleotide sample; a computer based system for identifying fragments of the Staphylococcus genome of commercial importance; a computer based system for identifying commercially important nucleic acid fragments of the Staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphylococcus staphyloco
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        compositions of the present invention are useful for the diagnosis, prevention and/or treatment of an Staphylococcal epidermidis bacterial infection. This is the amino acid sequence of a S. epidermis protein of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention describes an isolated nucleic acid comprising a nucleotide sequence with any of 3772 fully defined nucleotide sequences (SEQ ID NO: 1-3772) and encoding an Staphylococcus epidermidis polypeptide with any
                                                                                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA ABB72072). The sequence date for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             antibacterial; vaccine; antisense therapy; Staphylococcus epidermidis; recombinant expression vector; infection; computer readable medium; computer based system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | : | | | | | | | | | : : | | : : | | : : | | : : | | : : | | | : : | | : : | | : : | | : : | | : : | | : : | | : : | | : : | | : : | | : : | | : : | | : : | | : : | | : : | | : : | | : : | | : : | | : : | | : : | | : : | | : : | | : : | | : : | : : | | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : | : : |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Taourit S, Glaser P,
```

WPI; 2003-148459/14.

The invention relates to the isolation of genes and their encoded proteins from Photorhabdus luminescens. The isolated sequences are proteins from Photorhabdus luminescens. The isolated sequences are cources of probles and primers for detecting the genome of P. luminescens and related species; to study polymorphisms; for gene analysis and for detection/amplification of the genes. Antibodies (Ab) raised against the CD lypoptides encoded by the genes are used for detection/identification of P. luminescens, e.g. in foods. The genes, proteins, Ab and cells that carry a gene-containing vector are used to select compounds that carry a gene-containing vector are used to select compounds that carry a gene-containing vector inhibit expression of the genes in plants, animals or microorganisms other than P. luminescens and are able to alter response or sensitivity to toxins and antibiotics produced by P. CC luminescens. Cells transformed to express the genes are useful for recombinant production of the proteins, particularly toxins and antibacterials useful as insecticides, bactericides and fungicides. The combinant production of the proteins, particularly toxins and antibacterials vectors containing the genes and Ab are also useful ctherapeutically (to treat microbial infection by bacteria or fungithat are sensitive to P. luminescens encoded toxins or antibiotics) and as CC factors and for identifying targets of human diseases for which P. CC luminescens is a model (particularly plague and whooping cough). This sequence represents one of the isolated P. luminescens Genomic sequence of Photorhabdus luminescens and encoded polypeptides, useful e.g. as therapeutic antimicrobials and agricultural pesticides. Claim 2; SEQ ID NO 2140; 1205pp; French

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                      US-09-974-546C-86

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

NyAlternate names: nonstructural protein NS53
C; Species: simian rotavirus SA11
C; Date: 30-Jun-1991 #sequence_revision 30-Jun-1991 #text_change 09-Jul-2004
C; Accession: 808215
R; Mitchell, D.B.; Both, G.W.
Virology 174, 618-621, 1990
A; Title: Conservation of a potential metal binding motif despite extensive sequence dive A; Reference number: 808215; MUID: 90163231; PMID: 2154894
A; Accession: 808215
A; Molecule type: genemic RNA
A; Residues: 1-495
A; Cross-references: UNIPROT: P15687; EMBL: X14914; NID: 961889; PIDN: CAA33039.1; PID: 961896
C; Genetics:
A; Map position: segment 5
C; Superfamily: bovine rotavirus nonstructural protein NCVP2
C; Keywords: nonstructural protein; zinc finger
